DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 24-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Gocho et al. (US 5,498,565).

Gocho describes a method comprising: forming a SiN layer (claimed first sacrificial layer) over a substrate and etching the SiN using a photolithographic step (this would read on claimed of forming resist pattern on the first sacrificial layer and removing it) (col. 1, line 60-65; col. 10, line 47-50); forming a SiO₂ layer (claimed second sacrificial layer) over the SiN (col. 10, line 51-68); removing a portion of the SiO₂ by an etching back process until the SiN exposed (col. 11, line 25-30); forming a resist layer on the SiO₂ and SiN layers (col. 11, line 1-3); removing the SiO₂ not covered by the resist layer (col. 11, line 4-6).

The SiN and SiO₂ have an etching selectivity (col. 11, line 8-10).

Claim Objections

3. Claims 1-23 are objected to because of the following informalities: claims 1 and 11 show the words “and” and “performing” as one word “andperforming.” Appropriate correction is required.

Art Unit: 1765

Allowable Subject Matter

4. Claims 1-23 are allowable because applied prior art doesn't suggest or teach forming conductive lines or wordline on the gate oxide and performing ion implantation to implant dopants into the region not covered by the code mask, dielectric, and cap layer as mask.
